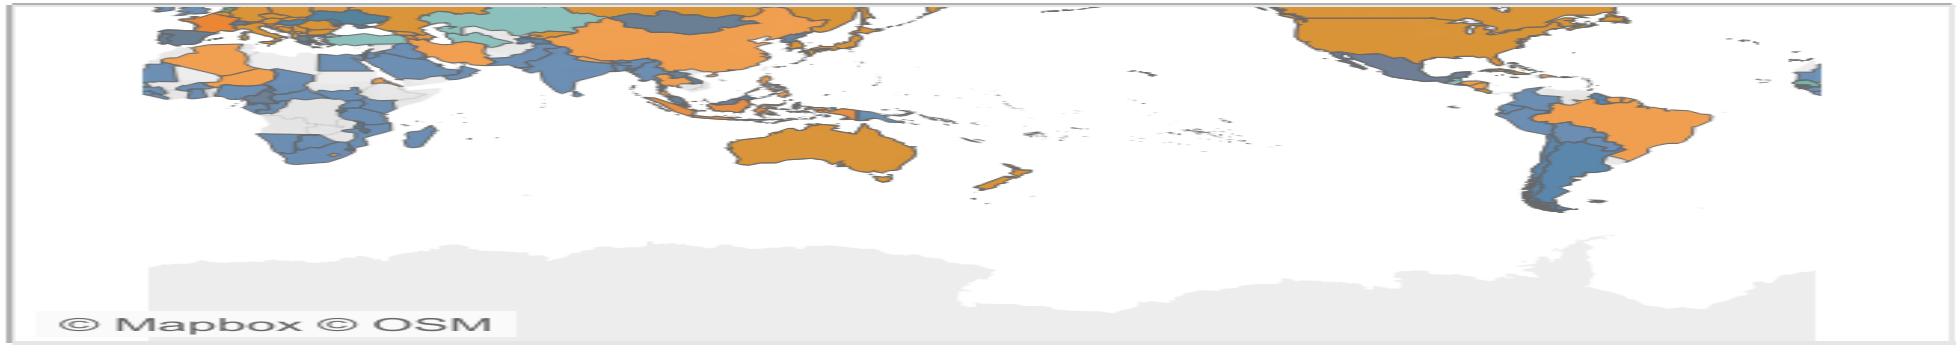
Tracing The Growth Of The Global Community: A Population Forecasting Analysis

PROJECT DESCRIPTION :

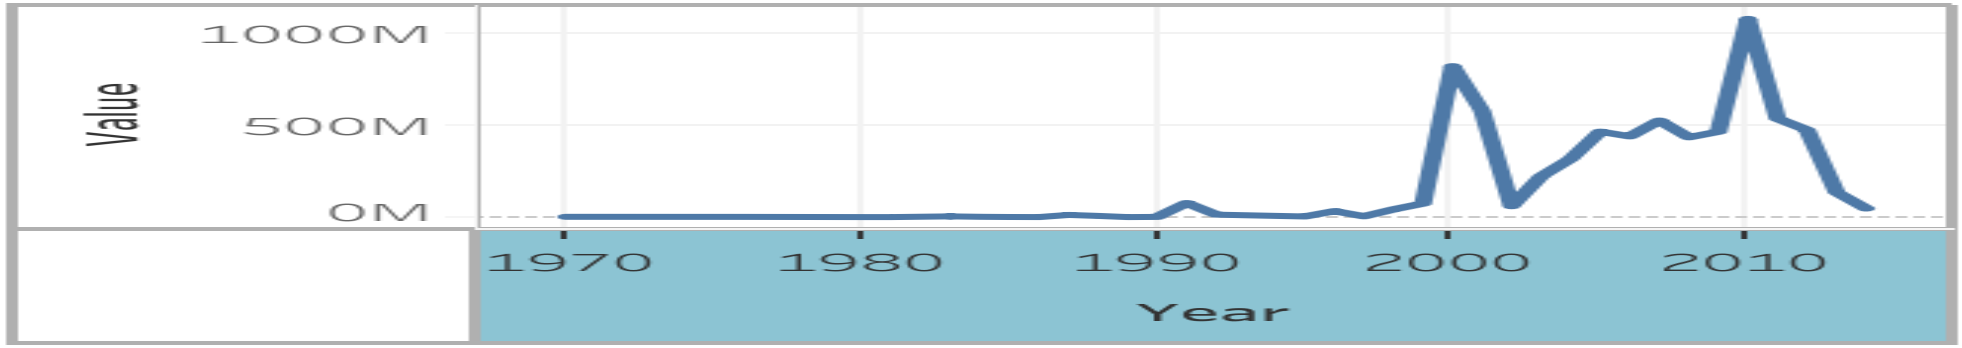
The world's population is more than three times larger than it was it in the mid-twentieth century. The global human population reached 8.0 billion in mid-November 2022 from an estimated 2.5 billion people in 1950, adding 1 billion people since 2010 and 2 billion since 1998. The world's population is expected to increase by nearly 2 billion persons in the next 30 years, form the current 8 billion to 9.7 billion in 2050 and could peak at nearly 10.4 billion in the mid-2080s.

This dramatic growth has been driven largely by increasing numbers of people surviving to reproductive age, the gradual increase in human lifespan, increasing urbanization, and accelerating migration. Major changes in fertility rate have accompanied this growth. These trends will have far-reaching implications for generations to come.

Record type of countries

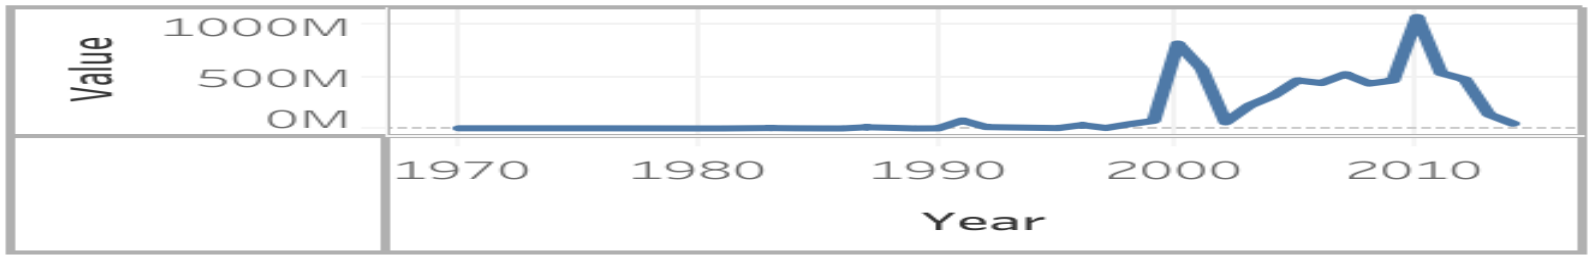


Population trends over the years

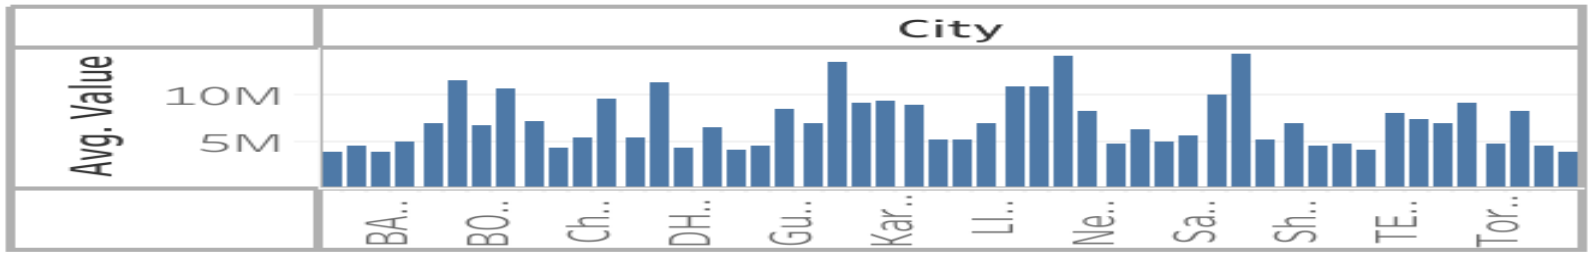


D 2

Population trends over the years by sex

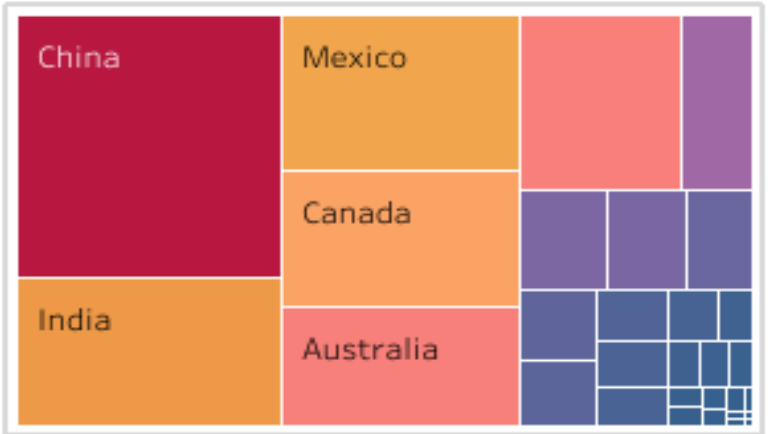


Cities with highest average populations

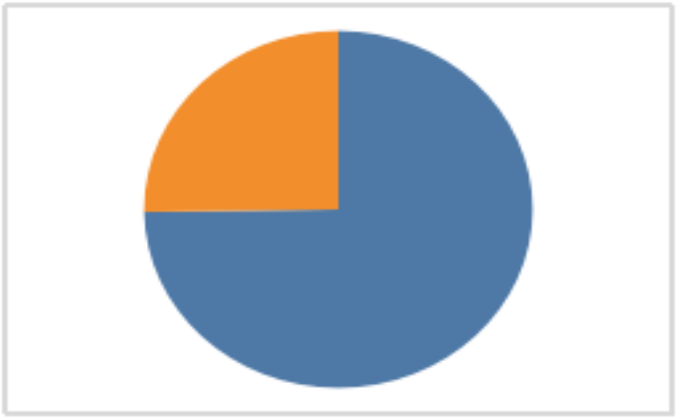


D 3

Countries by highest avg population from 2000-2014



Population by city type



Population of cities by year
